

Analog IP Cell

HF Rectifier RECT XH035

General Description

The rectifier is an analog IP Cell for 13,56MHz RFID applications. It is used to rectify the coupled magnetic power from a reader to a tag. In this case the rectifier has to be used with a limiter circuit to protect the circuitry against over voltage. The output voltage can be used to supply internal circuits. The rectifier provides a stable output voltage at different resistive loads.

At the output of this IP Cell there is a capacitor to bridge voltage drops (e.g. ASK modulation).

Ratings, Parameters and Condition

Parameter	Symbol	Min	Typ	Max	Unit	Comment
Antenna voltage	V_{ANT}			5,5	V	max. for internal transistors
Capacitor	C_{RECT}		200		pF	
Operating temperature	T_{op}	-40	27	80	°C	

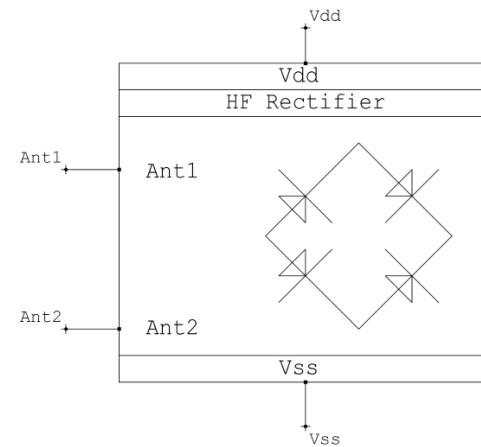

Behaviour Rectifier

Antenna voltage (V)	Resistive load (Ohm)	Rectifier voltage (V)
